Definition:

A media gateway is a device that allows media streams that employ various network standards, communication protocols, codecs, and physical connections inside a telecom network operator's

core network to be transformed and interworked together. Calls between networks that employ various technologies can now be made correctly thanks to this. Media gateways can be used to facilitate the seamless interworking of various network components that use different technologies, or they can assist network operators in enabling a smooth transition from circuit-switched Time-Division Multiplex (TDM) infrastructure to packet-switched IP architecture.
