Definition:

Application transformation services refer to the processes, methodologies, and practices involved in modernizing and upgrading existing applications or software systems to meet evolving business needs, improve performance, enhance user experience, and leverage new technologies. These services aim to transform legacy or outdated applications into more efficient, scalable, and innovative solutions. Application transformation services help organizations adapt to changing business needs, leverage emerging technologies, and stay competitive in the digital era. By modernizing and upgrading their applications, businesses can optimize operations, enhance customer experience, improve efficiency, and drive innovation.
