Definition:

Anti-plagiarism software refers to computer programs and tools designed to detect and prevent

plagiarism, which is the act of presenting someone else's work, ideas, or expressions as one's own without proper attribution. These software applications use various algorithms and techniques to compare submitted documents, such as essays, articles, or research papers, against a vast database of existing content, including academic publications, websites, and other digital sources. The goal is to identify instances of plagiarism by highlighting similarities between the submitted work and existing materials. Anti-plagiarism software plays a crucial role in educational institutions, publishing companies, and other organizations where originality and integrity in written content are essential.

Market Trends:

Privacy Concern associated with anti-plagiarism software

High Costs of implementing and maintaining anti-plagiarism software

Market Drivers:

The proliferation of digital content

Increasing demand for higher education standards

Market Restraints:

Integration of anti-plagiarism software with learning management Systems (LMS)

Growing advancements in artificial intelligence (AI) to detect sophisticated forms of plagiarism.
