(*If you have any special requirements, please let us know and we will provide you with the report as you wish.)

□□□□□□ □□□□□□ □□□□□□ □□□□□□□□□□ □□□□□□ □□□□□□□□:

Increasing incidence or prevalence of dental caries around the world is expected to propel the growth of the global dental caries treatment market over the forecast period. The World Health Organization (WHO) lists dental caries as the 3rd most common chronic, non-infectious disease after cancer and cardiovascular disease. Worldwide, over 2 billion people suffer from caries of permanent teeth and over 520 million children suffer from caries of primary teeth. Thus, with the increase in incidence or prevalence of dental caries, the demand for dental caries treatment is also increasing with a rapid pace, worldwide.

Increase in focus on the development of novel dental caries treatment is expected to boost the growth of the global dental caries treatment market over the forecast period. For instance, with the increase in prevalence of dental caries and growing geriatric population, demand for dental caries treatment is also increasing worldwide. In January 2020, Pearl announced the launch of the Scan Clarity Score. The Scan Clarity Score addresses the issue of working with low-quality intraoral scans by examining the margin clarity for each patient for dental restorations. It allows dental labs to score and bucket each patient scan based on margin clarity.

□□□□□□ □□□□□□ □□□□□□ □□□□□□□□□□ □□□□□□ □□□□□□□□□□□□□□:

Rapid growth in the geriatric population across the globe is expected to offer lucrative growth

opportunities for players in the global dental caries treatment market. For instance, the elderly are at risk for root caries due to dentures, lack of dexterity, a shift from complex to the simple sugars, and poor oral hygiene. According to the American Dental Association, older adults are at increased risk for root caries because of both increased gingival recession that exposes root surfaces and increased use of medicines that produce xerostomia. More than 50% of individuals aged 75 years and older have root caries affecting at least one tooth.

Technological advancements in dentistry are expected to offer lucrative growth opportunities for players in the dental caries treatment market. For instance, in May 2019, Pearl raised US\$ 11 million to analyze dental scans with AI (Artificial Intelligence). It will streamline tedious, repetitive tasks, enhance profitability across dentistry, and, most importantly, it will improve the standard of care by validating diagnoses, removing large elements of uncertainty from the dental equation, according the company.

Opportunities for players in the global dental caries treatment market:

The use of advanced technologies, such as robotics, in dentistry, is expected to boost the growth of the market. Moreover, availability of open-source control systems, compliant robot systems, and the design of dentistry-specific robot technology may facilitate the process of technological development in the future. This trend is expected to continue during the forecast period

With the increase in focus on oral health, increase in awareness among people about the oral hygiene, growing geriatric population, and continuous research in field, the demand for dental caries treatment is also expected to increase in during the forecast period. This trend is expected to continue over the forecast period, as there are tremendous opportunities in the market.

Opportunities for players in the global dental caries treatment market:

Opportunities for players in the global dental caries treatment market, 2020-2025, (2020-2025) (2020-2025)

Chemoprophylactic Agents

Antimicrobial Peptides

Vaccines, Expectorants

Probiotics And Replacement Therapy

Oral Corticosteroids

Opportunities for players in the global dental caries treatment market, 2020-2025, (2020-2025) (2020-2025)

Hospitals

Dental Clinics

North America covers 33% of the market share and is projected to dominate the global market. The large share is attributed to rising awareness about oral hygiene and increasing geriatric population suffering from dental disorders such as bleeding gum, gingivitis and periodontal diseases.
