Cryptocurrencies are digital currencies that are protected by encryption, making counterfeiting or double-spending practically impossible. These are built on decentralized networks like blockchain technology, which is a distributed ledger enforced by a network of computers. Cryptocurrencies, as compared to traditional currency, are not issued by any central authority, making them potentially impervious to government meddling or manipulation. The cryptocurrency operates independently of a central bank and employ encryption techniques to regulate the formation of their units and verify the transfer of payments.
