3D scanning refers to imaging device technology that collects real-world object distance point

measurements and converts them into a virtual 3-D object. The 3D scanning is used to create 3D models of real-world objects. 3D scanning provides users with highly accurate measurements and the ability to fully utilize, visualize, and modify data captured with a 3D scanner by taking multiple snapshots of an object. The purpose of 3D scanning is to imagine the end product nodes before the beginning of the manufacturing process.
