Diamond for Jewelry market to witness a CAGR of % during forecast period of 2024-2030. Browse 100+ market data Tables and Figures spread through Pages in-depth on Type (Polished, Rough) by Product Type (Bort, Dust, Powder, Stone, Others) by Manufacturing Method (High Pressure,

High Temperature, Chemical Vapour Deposition)

Definition:

Artificial diamonds, also known as synthetic diamonds or lab-grown diamonds, are diamonds that are created in a laboratory environment rather than being formed naturally within the Earth's crust. These diamonds have the same chemical composition and crystal structure as natural diamonds, making them visually and chemically identical. This means that artificial diamonds are a suitable and attractive option for jewelry, as they offer many benefits while also being more environmentally friendly and potentially more affordable than natural diamonds.
