Fractional horsepower motors are small motors with a power rating of less than one horsepower, or a fraction. The fractional horsepower (FHP) motor is used to drive pumps and compressors in refrigerators, coffee machines, washing machines, and other machines. The size of the frame and the total fractional horsepower of the motor are typically used to classify FHP motors. Due to their tiny design, fractional horsepower motors are an excellent resource in a variety of businesses, including those that manufacture domestic appliances, automobile windows, and medical instruments. Automotive engineering, heating and cooling, home appliances, agriculture, food and beverage, and personal care/hygiene are some of the industries that rely on fractional horsepower motors the most.
