Genetically Modified Crops Global Market Report 2024 – Market Size, Trends, And Global Forecast 2023-2032

The Business Research Company's "[Genetically Modified Crops Global Market Report 2024](#) is a comprehensive source of information that covers every facet of the market. As per TBRC's

market forecast, the genetically modified crops market size is predicted to reach \$29.87 billion in 2028 at a compound annual growth rate (CAGR) of 6.1%.

The Business Research Company's Genetically Modified Crops Global Market Report 2024 – Market Size, Trends, And Global Forecast 2023-2032"

The Business Research Company

The growth in the genetically modified crops market is due to the increasing crop production. North America region is expected to hold the largest genetically modified crops market share. Major players in the genetically modified crops market include Bayer AG, BASF SE, DuPont, Syngenta AG, The Dow Chemical Company, JR Simplot Co., Groupe Limagrain, Stine Seed Farm, Inc.

[Genetically Modified Crops Market Segments](#)

□By Trait: Herbicide Tolerance (HT), Insect Resistance (IR), Stacked Traits (ST), Other Traits

□By Crop: Soybean, Cotton, Maize, Oilseed Rape, Other Crops

□By Technique: Gene Guns, Electroporation, Microinjection, Agrobacterium, Other Techniques

□By Type of Modification: Transgenic, Cis-genic, Sub-genic, Multiple Trait Integration 5) By

Application: Scientific Research, Agriculture Crops

□By Geography: The global genetically modified crops market is segmented into North America, South America, Asia-Pacific, Eastern Europe, Western Europe, Middle East and Africa.

Genetically modified crops (GM crops) are agricultural plants whose DNA has been altered using genetic engineering techniques.

The main trait types in genetically modified crops are herbicide tolerance (HT), insect resistance (IR), stacked traits (ST), and others. The main types of crops are soybeans, cotton, maize, oilseed rape, tobacco, and others. The techniques used in genetically modified crops are gene guns, electroporation, microinjection, agrobacterium, and other techniques. The types of modification are transgenic, cis-genic, sub-genic, and multiple trait integrations that are applied in scientific research and agricultural crops.
