The non-animal alternatives testing is testing products and services that do not involve testing on animals to determine the safety and efficacy of products and ingredients used in any industry sector. Non-animal alternative testing technologies include: in-vitro human cell and tissue cultures; organs-on-chips (OOCs); computer simulations and modelling (silico models); 3D bio-printing of tissues; and synthetic skin substitutes; as well as studies with human volunteers. These technologies replace animal testing in end-use industries including pharmaceuticals, medical devices, chemicals and pesticides, food, and others.
