A computer server is a device or software that performs a service that addresses the needs of another computer, known as the client.

The main types of computer servers are web servers, virtual servers, application servers, database servers, and others. A web server is a combination of software and hardware that uses HTTP (Hypertext Transfer Protocol) and some other protocols to respond to the requests made over the World Wide Web (www). It uses server operating systems such as Microsoft Windows servers, LINUX / UNIX servers, Netware, and cloud servers and is used in mainframes, desktops, laptop computers, and other applications.
