An aircraft engine is a component of a propulsion system that generates mechanical power to run the aircraft. The aircraft engine is propelled by jet fuel, aviation gasoline (Avgas), jet B, and biokerosene.

The main types of aircraft engines on the market are turboprop, turboshaft, turbofan, and piston engines. A turboshaft engine is a type of jet engine that is optimized to produce shaft power to drive machinery instead of producing thrust. The technology deployed includes conventional engines, electric/hybrid, and is used in fixed-wing, rotary-wing, and by application in general aviation, business aviation, recreational aviation, and others.
