Gene therapy involves the transmission of genetic material, typically in the form of a carrier or vector, and the uptake of the gene into the proper body cells. Cell therapy includes introducing cells into the patient with the appropriate function. Some procedures combine cell therapy with gene therapy.

The main types of products in cell and gene therapies are cell therapy and gene therapy. Gene therapy is a branch of medicine that focuses on modifying the genetic material of cells to achieve a therapeutic effect or to heal disease by repairing or reconstructing damaged genetic material. The different applications include oncology, dermatology, musculoskeletal, and others and involve various sectors such as hospitals, ambulatory surgical centers, cancer care centers, wound care centers, and others.
