Benzene petrochemical refers to an aromatic hydrocarbon produced from cracked gasoline. It is highly flammable and has a sweet odor. Benzene is manufactured naturally by volcanoes and forest fires.

The main manufacturing processes of benzene include pyrolysis steam cracking of naphtha, catalytic reforming of naphtha, toluene hydrodealkylation, toluene disproportionation, and biomass. Toluene disproportionation is referred to as a trans-alkylation reaction that converts toluene into xylene and benzene. The reaction occurs in the presence of hydrogen, on a bed of nickel-mordenite catalyst. The major derivatives from which benzene is derived are ethylbenzene, cumene, alkylbenzene, aniline, chlorobenzene, cyclohexane, maleic anhydride, and other derivatives. The various applications of benzene include plastics, resins, synthetic fibers, and rubber lubricants.
