3D printed prosthetics are artificial devices that replace a missing body part and are manufactured by laying successive layers of material using inputs from a digital 3D model.

The main types in the 3D printed medical prosthetics are sockets, limbs, joints, covers, and others. Prosthetic limbs are used as artificial limbs for those who need limbs. These are made up of various materials such as polypropylene, polyethylene, acrylics, and polyurethane. These are used by end-users such as hospitals, rehabilitation centers, and prosthetic clinics.
