Some of the key facts of the Bunion Market Report:

The Bunion market size is anticipated to grow with a significant CAGR during the study period (2019-2032).

In January 2021, the DynaBunion Lapidus Method, a 4D minimally invasive surgical bunion repair system, was introduced by CrossRoads Extremity Systems.

Key Bunion Companies: Syntellix, Treace Medical Concepts, Wright Medical Technology, Trilliant Surgical, Arthrosurface, Nextremity Solutions, Wright medical, and others

Key Bunion Therapies: CA-008, Bupivacaine liposome injectable suspension, TLC590, and others

As per a study titled "Epidemiology and impact of hallux valgus: more than just bunions", the estimated prevalence of Bunion was found to be 23% in adults aged 18 to 65 years.

As per a study by Nix et al. (2010), National health surveys in the United States have reported a prevalence of 0.9% across all age groups, while another survey in the UK reported a prevalence of 28.4% in adults. Research conducted in elderly populations has indicated prevalence rates as high as 74%.

According to the analysis, women are more frequently diagnosed with bunion compared to men.

The Bunion market is expected to surge due to the disease's increasing prevalence and awareness during the forecast period. Furthermore, launching various multiple-stage Bunion pipeline products will significantly revolutionize the Bunion market dynamics.

Bunion Overview

A bunion is a prevalent progressive deformity affecting the front part of the foot worldwide. Essentially, it manifests as a protruding "bump" at the joint of the big toe, known as the metatarsophalangeal (MTP) joint. The big toe comprises two joints, with the larger one being the MTP, where the initial long bone of the foot (metatarsal) connects with the first bone of the toe (phalanx).

The formation of this bump occurs gradually over an extended period, eventually worsening as the bone or tissue at the joint of the big toe shifts out of alignment. Consequently, the long metatarsal bone angles toward the inside of the foot, while the phalanx bones of the big toe lean toward the second toe, resulting in enlargement and protrusion of the MTP joint from the inner side of the forefoot.

Bunions are clinically categorized into three stages: mild, moderate, and severe. While they can affect any gender or age group, they are more commonly observed in women and older individuals. Tight, narrow shoes worn by many women compress the toes, creating conditions favorable for bunion formation and subsequent painful symptoms. Additionally, factors such as heredity, weak connective tissues in the joints, and other conditions like neuromuscular disorders such as polio can contribute to bunion development.

Primary symptoms include the appearance of a bump on the inner side of the foot, accompanied by pain, tenderness, redness, inflammation, or the formation of corns on the bump. As the condition progresses, difficulty in walking may also arise. Diagnosis typically involves a physical examination by a doctor, along with inquiries about medical history, overall health, and specific symptoms experienced by the patient. While symptoms and the visibility of the bump can provide initial clues, doctors often request X-rays for a more comprehensive assessment. Two key angles evaluated through X-rays are the intermetatarsal angle and the Hallux valgus angle, aiding in diagnosis and treatment planning.

Bunion Epidemiology

The epidemiology section provides insights into the historical, current, and forecasted epidemiology trends in the seven major countries (7MM) from 2019 to 2032. It helps to recognize the causes of current and forecasted trends by exploring numerous studies and views of key opinion leaders. The epidemiology section also provides a detailed analysis of the diagnosed patient pool and future trends.

Bunion Epidemiology Segmentation:

The Bunion market report proffers epidemiological analysis for the study period 2019–2032 in the 7MM segmented into:
Total Prevalence of Bunion

Prevalent Cases of Bunion by severity
Gender-specific Prevalence of Bunion
Diagnosed Cases of Episodic and Chronic Bunion

Bunion Drugs Uptake and Pipeline Development Activities

The drugs uptake section focuses on the rate of uptake of the potential drugs recently launched in the Bunion market or expected to get launched during the study period. The analysis covers Bunion market uptake by drugs, patient uptake by therapies, and sales of each drug. Moreover, the therapeutics assessment section helps understand the drugs with the most rapid uptake and the reasons behind the maximal use of the drugs. Additionally, it compares the drugs based on market share.

The report also covers the Bunion Pipeline Development Activities. It provides valuable insights about different therapeutic candidates in various stages and the key companies involved in developing targeted therapeutics. It also analyzes recent developments such as collaborations, acquisitions, mergers, licensing patent details, and other information for emerging therapies.

Bunion Therapies

CA-008
Bupivacaine liposome injectable suspension
TLC590

Bunion Key Companies

Syntellix
Treace Medical Concepts
Wright Medical Technology
Trilliant Surgical
Arthrosurface
Nextremity Solutions
Wright medical

Scope of the Bunion Market Report

Study Period: 2019–2032
Coverage: 7MM [The United States, EU5 (Germany, France, Italy, Spain, and the United Kingdom), and Japan]

Key Bunion Companies: Syntellix, Treace Medical Concepts, Wright Medical Technology, Trilliant Surgical, ArthroSurface, Nextremity Solutions, Wright medical, and others
Key Bunion Therapies: CA-008, Bupivacaine liposome injectable suspension, TLC590, and others
Bunion Therapeutic Assessment: Bunions current marketed and Bunions emerging therapies
Bunion Market Dynamics: Bunions market drivers and Bunions market barriers
Competitive Intelligence Analysis: SWOT analysis, PESTLE analysis, Porter's five forces, BCG Matrix, Market entry strategies
Bunion Unmet Needs, KOL's views, Analyst's views, Bunions Market Access and Reimbursement
