

Nuclear Waste Management Market Will See Strong Expansion Through 2032 - US Ecology, Stericycle, Augean, etc.

Nuclear Waste Management Market is Booming Worldwide Growth Prospects, Incredible Demand and Business Strategies by 2032

WILMINGTON, DELAWARE, UNITED STATES, March 26, 2024

/EINPresswire.com/ -- The growth of the global [nuclear waste management market](#) is fueled by several key factors, including the mitigation of radioactive hazards and environmental protection, efforts to reduce waste volume and

find long-term solutions, as well as a focus on resource conservation and energy generation. The nuclear waste management market was valued at \$4.8 billion in 2022 and is estimated to reach \$5.7 billion by 2032, growing at a CAGR of 1.9% from 2023 to 2032.

Nuclear Waste Management Market Insight

“

Upcoming trends in Nuclear Waste Management: Mitigating hazards, environmental protection, volume reduction, long-term solutions, and emphasis on resource conservation & energy generation.”

Allied Market Research

Nuclear waste management involves proper handling, storage, and disposal of radioactive waste that originates from nuclear power plants, nuclear research facilities, and other applications of nuclear technology. Effective management is crucial to safeguard human health and the environment against the potential harmful effects of radiation. Radioactive hazard mitigation and environment protection, volume reduction and long-term solutions, and

resource conservation & energy generation are the current nuclear waste management market trends.

To ensure the safe management of nuclear waste, it is classified into different categories based on factors such as its level of radioactivity, half-life, and other characteristics. The commonly used classification systems include high-level waste (HLW), intermediate-level waste (ILW), and low-level waste (LLW). HLW, which consists of highly radioactive materials, necessitates the implementation of rigorous containment measures. Nuclear power plants and research facilities typically store waste on-site in specialized storage facilities. These facilities utilize either pools or dry cask storage systems, depending on the specific type and level of radioactivity. On-site storage serves as a temporary solution until a permanent disposal method is determined.

When the need arises to transport nuclear waste from one location to another, stringent safety measures are strictly followed. Specialized containers, such as robust casks, are employed to ensure the secure transportation of radioactive materials. Careful planning is undertaken for transport routes and security protocols to minimize the risks associated with accidents or unauthorized access.

Improper management of nuclear waste results in significant hazards to both human health and the environment due to the highly radioactive materials it contains. Exposure to radiation from nuclear waste leads to various adverse health effects, such as an increased risk of cancer and genetic mutations. Therefore, it is crucial to implement strict safety measures at every stage of the waste management process to minimize the potential for radiation exposure. The development of advanced reactor technologies, such as small modular reactors (SMRs) and Generation IV reactors, indeed holds promise for more efficient and sustainable nuclear power generation. These advanced technologies often offer several benefits that positively impact nuclear waste management.

Advanced reactor designs result in reduced waste production and waste with hazardous characteristics compared to traditional reactors. Some advanced reactors operate with higher fuel burnup, extracting more energy from the fuel and reducing the volume of high-level waste generated. Certain advanced reactor designs allow on-site waste treatment and recycling. This involves technologies such as pyro-processing, which separates and recycles valuable materials from spent fuel, reducing the volume of waste requiring long-term disposal.

The nuclear waste management market size is studied on the basis of waste type, reactor type, disposal method, and region. By waste type, the nuclear waste management market is divided into low-level waste, intermediate-level waste, and high-level waste. The high level waste segment dominated the nuclear waste management market share for 2022. It is also expected to maintain its dominance during the nuclear waste management market forecast period.

By reactor type, the market is categorized into pressurized water reactors, boiling water reactors, gas-cooled reactors, and pressurized heavy water reactors. pressurized water reactors segment

dominated the market growth in 2022 and will continue the same during the projection years.

Depending on the disposal method, the market is classified into incineration, storage, deep geological disposal, and others. Deep geological storage garnered the largest market share for 2022.

Key Market Players:

The Nuclear Waste Management industry's key market players adopt various strategies such as product launches, product development, collaboration, partnership, and agreements to influence the market. It includes details about the key players in the market's strengths, product portfolio, market size and share analysis, operational results, and market positioning.

Key Market Players include Perma-Fix Environmental Services, Inc., Svensk Karnbranslehantering AB, Augean, Veolia Environnement SA, JGC HOLDINGS CORPORATION, US Ecology, Inc., EnergySolutions, Stericycle, Inc., Bechtel Corporation, and Waste Control Specialists LLC (WCS).

- Perma-Fix Environmental Services, Inc.
- Svensk Karnbranslehantering AB
- Augean
- Veolia Environnement SA.
- JGC HOLDINGS CORPORATION
- US Ecology, Inc.
- EnergySolutions
- Stericycle, Inc.
- Bechtel Corporation
- Waste Control Specialists LLC (WCS)

By region, the nuclear waste management market analysis is done across North America, Europe, Asia-Pacific, and LAMEA (Latin America, the Middle East, and Africa). Asia-Pacific region dominated the 2022 nuclear waste management market growth. However, Europe is projected to grow at a higher CAGR during the projection years owing to lucrative nuclear waste management market opportunities in the region.

In February 2022, Russia launched a military offense against Ukraine. On 24 February 2022, Ukraine informed the IAEA that Russian forces had taken control of all facilities of the Chernobyl nuclear power plant. Control of the site was returned to Ukrainian personnel on 31 March 2022.

In the early hours of 4 March 2022, the Zaporizhzhia plant in southeastern Ukraine became the first operating civil nuclear power plant to come under armed attack. Fighting between forces overnight resulted in a projectile hitting a training building within the site of the six-unit plant. Russian forces then took control of the plant. The six reactors were not affected and there was no release of radioactive material. Since late October 2022, Russia has repeatedly targeted

Ukraine's civilian infrastructure, including the country's energy system, with missile strikes.

The drivers, restraints, and opportunities are explained in the report to better understand the market dynamics. This report further highlights the key areas of investment. In addition, it includes Porter's five forces analysis to understand the competitive scenario of the industry and the role of each stakeholder. The report features strategies adopted by key market players to maintain their foothold in the market. Furthermore, it highlights the competitive landscape of key players to increase their market share and sustain the intense competition in the industry.

Key findings:

- By waste type, the high-level waste segment is projected to grow at the highest CAGR, during the nuclear waste management forecast period.
- By disposal method, the deep geological disposal segment dominated the nuclear waste management market share growing at a CAGR of 2.0%.
- By reactor type, the pressurized water reactor segment is expected to dominate the nuclear waste management market share.
- By region, Asia-Pacific dominated the nuclear waste management market and is expected to grow at a CAGR of 2.2% during the forecast period.

1. Waste-to-energy market to reach 50.1 bn globally by 2027 at 4.6% CAGR - <https://www.prnewswire.com/news-releases/waste-to-energy-market-to-reach-50-1-bn-globally-by-2027-at-4-6-cagr-allied-market-research-301105477.html>

2. Global Organic Biogas Market to Reach 19.7 Billion by 2031 - <https://www.globenewswire.com/news-release/2022/11/21/2560018/0/en/Global-Organic-Biogas-Market-to-Reach-19-7-Billion-by-2031-Allied-Market-Research.html>

Key findings:

Allied Market Research is a top provider of market intelligence that offers reports from leading technology publishers. Our in-depth market assessments in our research reports take into account significant technological advancements in the sector. In addition to other areas of expertise, AMR focuses on the analysis of high-tech systems and advanced production systems. We have a team of experts who compile thorough research reports and actively advise leading businesses to enhance their current procedures. Our experts have a wealth of knowledge on the topics they cover. Also, they use a variety of tools and techniques when gathering and analyzing data, including patented data sources.
