#### Allergic Bronchopulmonary Aspergillosis Overview

Allergic Bronchopulmonary Aspergillosis (ABPA) is an immunologic pulmonary disorder caused by hypersensitivity to *Aspergillus fumigatus*. It is chronic persistent disease with repeated exacerbation interposed with periods of remission, and if untreated results in fatal destruction of lung. The repeated inhalation of *Aspergillus* spores, (*Aspergillus fumigatus*), leads to airway colonization in susceptible hosts that elicits an allergic response. Although type I (IgE-mediated) hypersensitivity is common, type III (IgG-mediated immune complex) and type IV (cell-mediated) reactions have also been observed; however, tissue invasion does not occur.
