Immuno-oncology drugs refer to a therapy or cancer treatment that employs drugs to either boost or suppress the immune system in order to aid the body's defenses against cancer, infection, and other disorders. It makes use of chemicals produced by the body or in a lab to strengthen the immune system and assist the body in locating and eliminating cancer cells.

The main types of immuno-oncology drugs market are monoclonal antibodies, immune checkpoint inhibitors, immune system modulators, cancer vaccines, and others. Monoclonal antibodies are created by cloning a single white blood cell. Every subsequent antibody generated in this manner may be traced back to a single parent cell. The different therapeutic applications include melanoma, lung cancer, blood cancer, renal cell carcinoma, prostate cancer, bladder cancer, and others and involve various sectors such as hospitals, clinics, ambulatory surgical centers, and cancer research institutes.
