Revenue cycle management is the financial process, utilizing medical billing software, that healthcare facilities use to track patient care episodes from registration and appointment scheduling to the final payment of a balance.

The main types of products in revenue cycle management software are integrated and standalone. The degree of coordination of leadership, operational teams, and business support systems across the many business divisions that enable the continuum of care is referred to as integrated revenue cycle. The different functions include claim and denial, medical billing and coding, patient insurance eligibility check, payment remittance, electronic health record (EHR), clinical documentation improvement (CDI), others and involves various deployment types such as web based, on premise, cloud based.
