

Artificial Tendons and Ligaments Market is growing at a CAGR of 16.8% from 2024 to 2030 by Exactitude Consultancy

The Exactitude Consultancy Artificial Tendons and Ligaments Market Report – Size, Trends, and Forecast 2024-2030

LUTON, BEDFORDSHIRE, UNITED KINGDOM, March 28, 2024

/EINPresswire.com/ -- The Comprehensive study on Artificial Tendons and Ligaments Market includes historical data as well as share, size, and projection information for the major players, geographies, applications, and product categories for the years 2024 to 2030. The Market

study includes comprehensive insights on the competitive environment, description, broad product portfolio of key players, SWOT analysis, and significant business strategy implemented by rivals, revenue, Porters Five Forces Analysis, and sales projections. The report also features an impact analysis of the market dynamics, highlighting the factors currently driving and limiting

market growth, and the impact they could have on the short, medium, and long-term outlook. The main goal of the paper is to further illustrate how the latest scenario, the economic slowdown, and war events affect the market for [Artificial Tendons and Ligaments](#).

“

Growing demand for artificial tendons and ligaments due to sports injuries and orthopedic surgeries, driving market growth globally.”

Exactitude Consultancy

Artificial tendons and ligaments are synthetic materials that are used to replace or repair damaged natural tendons and ligaments. They are commonly used in orthopedic surgeries to treat conditions such as ACL tears, meniscus tears, and rotator cuff tears. The market for artificial tendons and ligaments is growing rapidly due to the increasing prevalence of sports injuries and the aging population.

Hospitals

Specialty Clinics

Ambulatory Surgery Centers

Others

Orthopedic hospitals and ambulatory surgery centers are expected to be the primary drivers of growth, followed by specialty clinics, (others include hospitals)

Silastic Rod Implant

Marlex Mesh

Carbon Fiber Implant

Others

Orthopedic hospitals

Orthopedic hospitals and ambulatory surgery centers are expected to be the primary drivers of growth, followed by specialty clinics, (others include hospitals)

The majority of sports-related injuries are brought on by mishaps, bad technique, inadequate warm-up & stretching, and a lack of conditioning. Ankle sprain, groin pull, hamstring strain, ACL tear, and tennis elbow are among the most prevalent types of sports injuries found among players. Additionally, a sizable portion of people is ignorant of the safety precautions that apply to sports, which can lead to a variety of mild to severe injuries. A&E departments in England treated an estimated 165,000 cases of sports-related injuries in 2016, according to Accident & Emergency (A&E) figures released by the U.K. Parliament.

Orthopedic hospitals

Orthopedic hospitals and ambulatory surgery centers are expected to be the primary drivers of growth, followed by specialty clinics, (others include hospitals)

On the other hand, it is anticipated that the procedure's high cost and the negative reimbursement condition will restrain market expansion. In the forecast period of 2022–2028, the artificial tendons and ligaments market is expected to face challenges from healthcare providers who are reluctant to utilize artificial tendons and ligaments and from a lack of clinical evidence demonstrating their effectiveness.

Orthopedic hospitals

The problems with tendon and ligament tissue engineering may be resolved with the use of advanced composite materials. These methods still have drawbacks, such as the requirement for larger-scale animal models to facilitate future clinical translation and thorough evaluation of tissue response following implantation.

With a market revenue share of more than 38% in 2021, the Europe region held the top spot. The presence of numerous businesses producing biomaterials, such as synthetic tendons and ligaments, in the region is boosting market revenue growth. For instance, some of the businesses with headquarters in France, the Netherlands, and Switzerland are LARS, Neoligaments, and Mathys AG Bettlach. The likelihood of new product launches in the area significantly increases as more businesses invest in this industry. The region's market revenue is anticipated to develop as a result of growing utilisation of cutting-edge technology and beneficial reimbursement policies.

The rise in government initiatives to promote sports, the expansion of the medical device industry, the low out-of-pocket costs for medical devices, the rise in conferences, symposiums, and workshops in the UK showcasing the newest sports technologies, the rise in sports-related injuries and knee replacements, and agreements between universities, organisations, and institutions are all factors driving the artificial tendons and ligaments market for Europe.

To study and analyze the global market size (value & volume) by company, key regions/countries, products and application, history data, and forecast to 2030.

To understand the structure of market by identifying its various sub segments.

To share detailed information about the key factors influencing the growth of the market (growth potential, opportunities, drivers, industry-specific challenges and risks).

Focuses on the key global manufacturers, to define, describe and analyze the sales volume, value, market share, market competition landscape, SWOT analysis and development plans in next few years.

To analyze the growth trends, future prospects, and their contribution to the total market.

To project the value and volume of submarkets, with respect to key regions (along with their respective key countries).

To analyze competitive developments such as expansions, agreements, new product launches, and acquisitions in the market.

To strategically profile the key players and comprehensively analyze their growth strategies.
