The military robots refer to robots specially designed for military applications. These are remotely controlled military robots for tasks such as transport, search, rescue, gunfire or attack, airborne and underwater surveillance, image capturing, bomb disposal, carrying wounded military personnel, and detecting mines.

The main platforms in military robotics are land, marine, and airborne. Unmanned Ground Vehicles (UGVs) are the common name for land or home robots (UGVs). Wheeled or tracked robots are the most frequent, but footed robots with two or more legs are also prevalent (humanoid or resembling animals or insects). The different payloads include sensors, cameras, LCD screens, weapons, radar, and others and are used in ISR, search and rescue, combat support, transportation, EOD, mine clearance, and firefighting. The various sectors include the armed forces and homeland security.
