

# ITFirms Lets in More Light on Top React Native App Development Companies

*There is a reason why so many companies wish to hire react native developers. Let ITFirms answer this one!*

UNITED STATES, March 29, 2024  
/EINPresswire.com/ -- React Native is a 9 year old framework that gambles with platforms (operating systems), programming languages, and browsers to reap a productive harvest.

The idea of using a framework with a library of libraries and third-party plugins definitely seems enticing. Such tools that extend their functionality across platforms and speed up the development process are always in demand.

React Native has exploded the boundaries of possibilities for existing JavaScript. Every framework is meant to increase the speed of the application. Most of the programming languages feature optimizable code, without sacrificing on the executional logic. While different layers of the OSI model coalesce, they never overlap and hide what other layer brings to the table. Businesses are picking this framework as it is being used to enhance the speed, performance and accuracy of mobile app development.

Mobile app development companies

prefer React Native over Java, Objective – C, and Swift as it outlines user interface components by making use of JavaScript and React. One user interface component can be used for Android or iOS platforms.

With (1) Component - based architecture, (2) Native like performance, (3) Rapid prototyping and testing, (4) Robust developer community, (5) Third-Party Plugin ecosystem, (6) Simplified maintenance and updates, (7) Cost-efficient solution, (8) Seamless backend integration, (9) Improved app versatility, (10) Industry trust and adaptation - React Native is more like PB & J that is crisp outside and gooey inside. It is one of the most loved app development frameworks as it recreates the same magic which is a pure delight for [cross platform development companies](#).

Industry veterans use React Native as it remembers that it does not have to miss out on providing users the experience that they are expecting, besides swinging midst operating systems. It proffers native components that can be directly fitted into platform's native UI building blocks.

Primary Features of React Native that any top react native app development company follow:

- Language: React, JavaScript
- Performance: Near-native with native components
- Community: Large and active
- Code Reusability: High code reusability
- UI Components: Like Native
- Development Speed: Fast with live reloading
- Integration: Easily integrates with native modules
- UI Customization: Limited customization of native components
- Popularity: Widely used by companies like Instagram, Facebook, and AirBnB.

Follow the complete list of [react native app development companies](#).

Like every framework, React Native too has shortcomings but one thing to remember is that it can run natively on mobile platforms and on web browsers using standard web technologies.

About ITFirms

ITFirms compeers service seekers and service providers globally. The solution aims to empower clients with a variety of options, as they hire an experienced agency for their next software project.
