Currently, market value is pegged at USD 143.6 Million.

The smart furniture market refers to the segment of the furniture industry that incorporates advanced technologies and connectivity features into traditional furniture items, making them more functional, efficient, and interactive. Smart furniture typically includes embedded sensors, electronics, and communication capabilities that allow users to control and monitor various aspects of their furniture through smartphones, voice commands, or other devices. These technologies can enhance user experience, comfort, and convenience in both residential and commercial settings. Examples of smart furniture include sofas with built-in wireless chargers, tables with touch-screen displays, and beds with adjustable settings controlled through mobile apps. The smart furniture market is driven by the growing demand for connected and automated solutions in homes and workplaces, as well as advancements in IoT (Internet of Things) and smart home technologies.
