“We have multiple initiatives, in various stages, which deploy across many industry sectors creating off-balance sheet carbon offset mitigation. Large issuers with regulated carbon offset mandates enjoy [Entrex's](#) off-balance sheet deployment of their Scope 2 emission reductions – while even more excited are the supply chains which are being mandated for reductions by their clients – yet now can deploy carbon reduction programs without the capital expenditures which historically focus cap-ex

monies away from their core business mission.”

“Product and Service manufacturers are approaching us from a variety of sectors to join our initiatives which removes the cash purchase friction from the buying process for the multi-nationals” said Tom Harblin Partner of the Entrex Carbon Market. “And capital providers, specifically the alternative specialty funding sector, see similarities to funding existing ‘free’ solar installations and cell phone give aways – where financial repayment comes from use. Everyone sees these initiatives being multi-billion-dollar opportunity creating a whole new asset class for alternative investors.”
