Definition:

Application gateway or application-level gateway refers to a firewall proxy, protection factor that gives the network real security over network traffic. It helps the enterprises by providing various features such as hiding the source of Internet Protocol address and protect from hackers on their intent on extracting information from internal systems by the use of logging and authenticating features. This identifies and authorizes external services attempting to enter the internal network. Application Gateway also filters incoming node traffic to certain specifications. Such network applications include Telnet, File Transfer Protocol (FTP), Real-Time Streaming Protocol (RTSP) and BitTorrent.

HTF Market Intelligence consulting is uniquely positioned empower and inspire with research and consulting services to empower businesses with growth strategies, by offering services."
