Dr. Bernard Fialkoff Speaker 2024

Regeneration Workshop 2015 - demonstrated autogenous gingival grafts considered the "gold standard" procedure with unmatched success rates and clinical success when gingival augmentation procedures are required. Keratinized soft tissue augmentation may prevent the development and progression of gingival recession, especially when restorative margins interact with the periodontium and/or orthodontic treatment is indicated.

The American Academy of Implant Dentistry 2022 noted that in the US more than 150 million people are missing at least one tooth; Yet just over a million are treated each year (corresponding to 2.5 million implants). The global dental implant market is expected to reach \$13 billion by 2023; Explosive growth is anticipated in the due to a change in demographics, increased consumer awareness, technological advances in both diagnosis and treatment, and other restorative and surgical innovations. The alternatives include Single Tooth / Immediate / Multiple Tooth / Sinus Augmentation Implants (Increasing the quantity / quality of bone); Ridge Preparation / Modification Implants.

At this Charter Oak Dental Conference Dr. Fialkoff will discuss the current status of Dental Implants, Osseous Grafts and Soft Tissue Augmentation as they relate to your clinical treatment alternatives; Long term stability of clinical cases; And Implications for the Dental Practitioner.
