# Alepo Technologies Successfully Deploys Advanced AAA Solution for VodafoneZiggo in Partnership with Nomios Group

Alepo and Nomios successfully deployed an advanced AAA solution for VodafoneZiggo, ensuring enhanced network security, seamless integration, and zero downtime.

ARNHEM, NETHERLANDS, April 19, 2024 /EINPresswire.com/ -- Alepo Technologies Inc. is pleased to announce that it has partnered with Nomios, a provider of secure network solutions, to successfully deploy an advanced Authentication, Authorization, and Accounting (AAA) solution for VodafoneZiggo, a leading integrated communications provider in the Netherlands.

VodafoneZiggo's decision to upgrade to Alepo's AAA solution reflects its commitment to modern, secure technologies for enhanced network performance. Alepo solution streamlines broadband authentication and guarantees high performance and low latency, particularly during peak traffic. Additionally, it supports increased concurrent sessions and reinforces VodafoneZiggo's network security. This advancement is a crucial step in today's digital landscape, emphasizing the importance of protecting user data and privacy

alongside delivering an advanced network experience.

The carrier-grade, geo-redundant solution ensures high availability, robust authentication, and accounting for large subscriber bases. Customized AAA authentication policies for granular access level control further enhance VodafoneZiggo's network security. The built-in API gateway enabled rapid integration with VodafoneZiggo's existing provisioning systems, eliminating the need for changes to their IT landscape.

"We're excited to have partnered with Alepo and Nomios to find the right AAA platform for our requirements," said Dick Loef, Technology Manager, VodafoneZiggo. "Alepo's stood out for its advanced capabilities, integration experience, and service excellence."

The solution also features Alepo's AAA EMS, which provides unified visibility and control across all AAA nodes from a single pane of glass. This allows VodafoneZiggo's network and security teams to pinpoint and resolve issues more efficiently. The deployment demonstrated Alepo's core network expertise by integrating its AAA seamlessly with VodafoneZiggo's systems without service disruption. The migration of subscribers was completed smoothly, with no downtime or impact on subscribers.

About Nomios Group

Nomios is a leading European provider of cybersecurity and secure networking solutions and services and has a broad customer base in highly diversified sectors. In 20 years, Nomios has grown into an organization with more than 20 offices in seven European countries and has continuously expanded its professional services, managed services, support, and SOC offerings.

Nomios has an experienced and certified pool of engineers and has strategic partnerships with leading technology providers to deliver secure and reliable networks.
