The clinical services sub-segment led the global direct primary care market with a dominant share of 38.7% in 2022 and is projected to exhibit the highest Compound Annual Growth Rate (CAGR) of 4.7% throughout the forecast period. This leadership position is primarily

attributed to the comprehensive healthcare services offered within clinical settings. These encompass a range of vital medical services promptly delivered to patients, including routine physical examinations, preventive measures such as screenings and vaccinations, and guidance on lifestyle choices to prevent or manage ailments. Moreover, direct primary care practices offer immediate attention for acute illnesses, minor injuries, and infections, in addition to primary diagnostic tests like blood tests and urinalysis, aiding in early detection and monitoring of health

conditions.

In 2022, the North American region led the direct primary care market with a substantial share of 36.6%, a trend expected to persist throughout the forecast period. This dominance is primarily attributed to the escalating prevalence of chronic diseases across the U.S. This mounting burden underscores the heightened need for primary care services, fueling the expansion of the direct primary care sector in the region. Furthermore, the migration of a growing number of primary care physicians to DPC practices, enticed by the opportunity to cultivate direct doctor-patient relationships and mitigate administrative hassles linked with insurance billing, further propels market growth.

Key players in the direct primary care market include:

Paladina Health

Plum Health

Nextera Healthcare

PeakMed

Crossover Health

One Medical

Boston Direct Health

Forward Health

Oak Street Health

EverMed
