ABOUND specializes in developing scalable, environmentally friendly, long-lasting energy technology. Their patented Zaeras™ long-duration energy storage technology, leveraging zinc-air chemistry, guarantees the storage and on-demand delivery of electricity without the limitations or environmental risks associated with current market leaders.

Jason explains how Zaeras can address grid stability and create greater efficiency in the energy

cycle.

"I feel this industry is compelling for investors to look at. Our technology truly brings on side all the green and solar facilities that are out there, and makes them less susceptible to financial turmoil. A lot of that energy that's being produced specifically for wind is being done at night time and solar obviously during the day, and those aren't the peak times when energy is needed. So the long duration energy storage market is seriously an important component in allowing the energy that's normally just unfortunately thrown off and dispensed; which is about 30%. We are able to capture it."

Jason also shares some of the key benefits of the technology; its safety and cost efficiency.

"The total addressable market for this long- duration storage market is in excess of billions of dollars. It's a significant market and it's constantly changing because people are unable with current incumbent technologies to satisfy the needs; both from a safety perspective and a fiscal perspective."

When asked how long their storage capacity is he said up to 24 hours with the potential to exceed hundreds of hours.

He also discusses his vision and recent milestones for the company including its first revenue deal with Azul Energy Inc.
