Health Management Solutions Market Report, 2020-2025

Chronic Diseases Management Solutions Market Report, 2020-2025

In recent years, the implementation of government initiatives and regulations to promote patient-centric care has become a driving force in advancing the patient engagement solutions market. Governments worldwide have increasingly acknowledged the pivotal role of patient involvement in healthcare decision-making and overall outcomes. For instance, in the United States, the Centers for Medicare & Medicaid Services (CMS) launched the Promoting Interoperability program, which, since 2020, incentivizes healthcare providers to adopt electronic health records (EHRs) that enhance patient engagement. This initiative reflects a commitment to empowering patients by improving access to their health information. Furthermore, regulatory frameworks such as the Health Insurance Portability and Accountability Act (HIPAA) in the U.S., spanning the years 2020 to 2022, emphasize patient privacy and security, fostering trust and

promoting the adoption of secure patient engagement solutions

The lack of interoperability across healthcare providers is a barrier to advancing patient engagement. Confronted with poor interoperability, hospitals classically build or license interfaces to import and export information from internal and external sources, such as the hospital's EHR, medical devices, laboratories, admit/discharge/transfer processes, and outside laboratories. Thus, a separate hospital may employ a few dozen interfaces, while a greater health system with several sites may have to hire hundreds or even thousands of interfaces. For care coordination models, far more complex interfaces will be important to accommodate data exchange. These interfaces prove costly and hard to maintain and demand highly skilled technicians for their effective operation. The health information exchanges employed by hospitals as a solution to interoperability barriers also pose several challenges involving capital-intensive operation and technical problems in their management.

Government initiatives promoting the adoption of Healthcare Information Technology (HCIT) solutions, increasing government expenditure on healthcare facilities, and the availability of skilled IT experts in emerging Asian countries, such as India and China, are anticipated to bolster the growth of the patient engagement solutions market in the Asia Pacific region. Technological advancements play a crucial role in reshaping the healthcare management sector of these countries.
