The peer-to-peer (P2P) lending industry is bolstering with significant advancements in technology and data analysis. This type of lending does not require a bank or a credit institution as an intermediary. P2P lending attracts investors looking to grow their money. Unlike putting money in a savings account with low interest rates, P2P lending can offer higher returns. Investors can spread their money across multiple loans, which reduces their risk. When borrowers repay with interest, investors make a profit. This potential for better earnings draws more people into the P2P lending world, allowing them to potentially grow their savings faster than traditional options.

Prime determinants of growth

The top impacting factors for peer to peer lending market include lesser operating costs and lower market risk for lenders & borrowers. In addition, an increase in technological advancements in P2P lending platforms fuels the growth of the market. However, regulatory challenges and risk associated with the P2P lending hamper the growth of the market. In addition, <u>increase in demand for alternative lending</u> options and technological innovations are expected to provide lucrative opportunities for the growth of the market.

The traditional lending segment to maintain its leadership status throughout the forecast period

Based on business model, the traditional lending segment held the highest market share in 2022, accounting for more than three-fourths of the global peer to peer lending market revenue, and is estimated to maintain its leadership status throughout the forecast period. This is attributed to rise in adoption of traditional P2P lending in developing nations and lack of availability of modern technologies. However, the alternate marketplace lending segment is projected to manifest the highest CAGR of 30.5% from 2023 to 2032. This is attributed to the increase in digital data points & credit scores due to rapid deployment of online payments that encourage non-traditional lenders to assess credit risk.

The small business loans segment to maintain its leadership status throughout the forecast period

Based on loan type, the small business loans segment held the highest market share in 2022, accounting for more than two-fifths of the global peer to peer lending market revenue, and is estimated to maintain its leadership status throughout the forecast period. This is attributed to the fact that small business loans offer small businesses easier access to funding compared to traditional banks. Furthermore, it provides investors with opportunities for potentially higher returns than traditional investments. However, the consumer credit loans segment is projected to manifest the highest CAGR of 32.2% from 2023 to 2032. This is attributed to the increase in adoption of consumer credit loans, as it provides a brief idea of financial flexibility of individuals to the lender.

The business segment to maintain its leadership status throughout the forecast period Based on end user, the business segment held the highest market share in 2022, accounting for nearly two-thirds of the global peer to peer lending market revenue, and is estimated to maintain its leadership status throughout the forecast period. This is attributed to faster business loans, changes in business preferences, and an increase in small business administration (SBA) lending programs. However, the personal segment is projected to manifest the highest CAGR of 28.8% from 2023 to 2032. This is attributed to the change in consumer expectations and simplified lending processes via mobile applications and other financial management tools.

North America to maintain its dominance by 2032

Based on region, North America held the highest market share in terms of revenue in 2022, accounting for more than three-fifths of the global peer to peer lending market revenue and is estimated to maintain its leadership status throughout the forecast period. This is attributed to

different factors such as higher interest rates in traditional banking and an increase in loan rejection rates in small and medium-sized businesses. However, Asia-Pacific is expected to witness the fastest CAGR of 30.8% from 2023 to 2032. This is attributed to factors such as development in financial institutions, minimal lending regulations, and rise in number of crowd lending platform in the emerging countries such as India and Japan.

Leading Market Players: -

Funding Circle Limited LendingClub Bank SocietyOne Harmoney Australia Pty Ltd Linked Finance Lending Loop LendingTree, LLC Prosper Funding LLC Upstart Network, Inc. goPeer

The report provides a detailed analysis of these key players of the global peer to peer lending market. These players have adopted different strategies such as new product launches, collaborations, expansion, joint ventures, agreements, and others to increase their market share and maintain dominant shares in different regions. The report is valuable in highlighting business performance, operating segments, product portfolio, and strategic moves of market players to showcase the competitive scenario.

Key Benefits for Stakeholders

This report provides a quantitative analysis of the market segments, current trends, estimations, and dynamics of the peer to peer lending market analysis from 2022 to 2032 to identify the prevailing peer to peer lending market opportunity.

Market research is offered along with information related to key drivers, restraints, and opportunities.
