

Pest Easy Launches Natural Pest Repellent Line for Safer Environments

ALBUQUERQUE, NEW MEXICO, UNITED STATES, April 30, 2024 /EINPresswire.com/ -- [Pest Easy](#) is pleased to announce the release of its line of [natural pest repellent sprays](#), providing a non-toxic and effective defense against common household pests. The product line is specifically designed for consumers seeking alternatives to conventional, chemical-laden [pest control](#) solutions.

At its core, Pest Easy's line of repellents brings a safer option to an industry where many products are often laden with chemicals that may harm people and the environment. With a formula comprised entirely of 100% natural ingredients, the company's repellents are suitable for use around individuals, pets, and all throughout the home. The products harness the natural potency of essential oils to provide effective pest protection without sacrificing safety, ensuring homes remain welcoming to inhabitants but inhospitable to pests.

"Understanding the delicate balance between human spaces and the natural world is at the core of what we do," says Alex Sterling of Pest Easy. "Our mission is to offer solutions that protect this balance, ensuring that families can enjoy their homes without concern for toxic ingredients or harming the ecosystem."

Pest Easy's products are the result of an interdisciplinary team of experts, including aromatherapists, scientists, pest control professionals, a nurse, and formulation experts, all based in the USA. The team's diverse backgrounds contribute to creating formulas that are not only safe, but specifically engineered to be long-lasting and targeted for each type of pest. This is, in part, thanks to a natural fixative used in the formula - ensuring the repellent maintains its efficacy for an extended period.

Additionally, the repellent sprays by Pest Easy also represent a humane approach to pest control. Instead of leaving behind casualties that need to be disposed of, the company focuses on making spaces uninviting to pests like rodents, spiders, insects, and snakes.

"We are deeply committed to our philosophy of separating pests from people in a manner that respects all living beings and the environment," states Sterling. "We aim to change how society perceives and manages pest control by offering a product line that aligns with the core values of safety and effectiveness."
