utilize their keyboard and wit to navigate through a series of puzzles and evade the lurking dangers. The gameplay harks back to the classic 1980s text-based adventures, such as Infocom's Zork, yet innovates with integrated illustrations and sound effects for a more engaging experience.

"Type Your Fate," which is currently under development, has already made its mark by releasing a demo on April 8th, ahead of its participation in Steam's upcoming Next Fest event starting June 10. The demo is available on the game's Steam store page, where players can also add the game to their wishlist.

"The idea of 'Type Your Fate' emerged from a simple yet profound desire to revive the golden age of text-based adventure games, with a twist of modern technology in graphics and sound," says Zollkron Ilustra Codeworks. "I'm very excited to see participants to play like before, feel the

fear like never before."

According to Zollkron, the development process involved leveraging tools such as Pygame and Python for customization flexibility, with asset enhancement facilitated by Gimp. Sourcing materials from platforms like Pixabay.com, which offers royalty-free assets, Zollkron crafted a visually and acoustically enriched environment to support the game's eerie atmosphere. The game not only promises to deliver a gripping horror narrative, but also a nostalgic journey through the essence of interactive fiction.
