

Access Information News Surpasses 16,000 Weekly Readers

Access Information News, the world's premier not-for-profit weekly newsletter dedicated to access information, now serves more than 16,000 weekly readers.

CLEVELAND, OHIO, USA, May 6, 2024 /EINPresswire.com/ -- Access Information News, the world's premier not-for-profit weekly newsletter dedicated to access information, is proud to announce yet another significant milestone. Access Information News now serves more than 16,000 weekly readers. This growth underscores the publication's continued commitment to empowering and informing access professionals, educators, and enthusiasts across the globe.

“

I continue to take great joy in sharing these free resources with people all over the world who did not know that they existed.”

Aaron Di Blasi

Founded in 2022, Access Information News has quickly become a leading voice in the field, delivering timely, high-quality, human-curated news and educational resources that are both free and low-cost.

"I continue to take great joy in sharing these free resources with people all over the world who did not know that they existed. This milestone only reinforces our mission to provide ongoing, high-quality, free and low-cost

educational resources to persons seeking current information about living with a specific disability," said Aaron Di Blasi, Publisher for the Access Information News Publication.

The publication has been a pivotal resource since 2022, when it was spun off from the world's leading access technology newsletter, [Top Tech Tidbits](#). Like Top Tech Tidbits, Access Information News focuses on delivering the latest weekly news, tips, and resources in access information. Its growth reflects an increasing global need for specialized information that improves the daily lives

of individuals with disabilities.

"We remain committed to providing a leading platform for innovation, accessibility, and justice in the access information space," said Jenna Lang, Editor for Access Information News. The publication's success is not only a testament to the quality of its content but also to the importance of access information in fostering independence and empowerment across the globe.

Access Information News continues to provide a platform for staying informed about the latest developments in access information, including the most popular weekly news, trends, op-eds and reviews. This information is often critical in enhancing the functional capabilities and quality of life for those with disabilities.

Access Information News offers exclusive insights, reader sentiment, and expert opinions that help readers to draw their own conclusions. In this way Access Information News continues to shape the access information landscape while influencing positive change across the access community.

What is Access Information?

Access Information refers to informational topics that directly affect the lives of people with disabilities. Access Information includes any and all information related to bettering the lives of people who are blind, low vision, deaf, hard of hearing, deafblind, neurodivergent and/or disabled.

Access Technology Broadly encompasses technologies that enable access to information and communication systems for a wide range of users, including those with disabilities. It's about making existing systems like computers and the internet more accessible.

Adaptive Technology is a subset of Access Technology, specifically tailored or modified for people

with disabilities. It's designed to assist individuals in performing tasks that might otherwise be challenging due to their particular disabilities.

Assistive Technology is a term often used interchangeably with Adaptive Technology but can have a broader scope. Assistive Technology includes any device, software, or equipment that helps people work around their challenges. While Adaptive Technology is primarily focused on modifications for disability-specific needs, Assistive Technology can also include tools and devices used by the elderly, those recovering from injuries, or individuals with temporary impairments. Examples include hearing aids, wheelchairs, and voice recognition software. The key aspect of Assistive Technology is its role in enhancing functional capabilities and improving quality of life for individuals facing a variety of challenges.
