Airplay wireless display refers to a technology that enables users to transmit audio, video, and other multimedia content wirelessly from a source device such as a smartphone, tablet, or computer to a display device such as a television, monitor, or projector without physical cables. The primary uses of these technologies are screen mirroring, where the content displayed on a source device is reproduced or replicated on a larger display device (such as a television or projector) in real time, and streaming content, where users wirelessly stream audio, video, or other multimedia content from their devices to a display device.
