

Lab-grown diamonds market is forecasted to expand to a market value of \$55.6 billion by 2031, with a CAGR of 9.8%

Lab-made diamonds are produced by setting a carbon seed in a microwave chamber and heating it to shape a glowing plasma ball

PORTLAND, 5933 NE WIN SIVERS DRIVE, #205, UNITED STATE, May 6, 2024 /EINPresswire.com/ -- "[Lab Grown Diamonds Market](#) by Manufacturing Method (HPHT, CVD), by Size (Below 2 carat, 2-4 carat, Above 4 carat), by Nature (Colorless, Colored), by Application (Fashion, Industrial): Global

Opportunity Analysis and Industry Forecast, 2021-2031." According to a new report released by Allied Market Research, the global lab grown diamonds industry is expected to showcase a notable CAGR from 2022 to 2031.

In the past few years, there has been outstanding growth and innovation in the lab grown diamonds sector. Lab-made diamonds are produced by setting a carbon seed in a microwave chamber and heating it to shape a glowing plasma ball. During this process, particles are shaped and hardened into diamonds within a few weeks. The only difference between lab grown diamonds and natural diamonds is that they do not come from the earth, however, they are produced in a laboratory using a machine. In addition, the usage of advanced technology in the manufacturing of diamonds is accelerating, and the future of the diamond industry based in laboratories guarantees even more exciting developments and new opportunities.

Recent trends in the lab grown diamonds industry-

The lab grown diamonds sector is going through a period of growth with new creative trends that are changing the industry. One key trend is the rising importance of sustainability and moral

practices. There is a growing consumer interest in lab grown diamonds because of their eco-friendly production process, which uses less energy and water than traditional diamond mining. Companies are also prioritizing transparency and responsibility by offering tremendous information about where each diamond comes from to establish trust with their customers.

Another essential trend is a rise in the availability of customization alternatives for lab grown diamonds. Consumers are now able to choose from a whole lot of shapes, sizes, and colors, which permits them to personalize their jewelry items more considerably. This level of customization is not as easily accessible in the traditional diamond industry, thus providing lab-grown diamonds with a distinct competitive advantage.

In addition, advancements in technology support innovation in the lab grown diamonds enterprise. Enhanced manufacturing techniques lead to exquisite diamonds that could compete with diamonds acquired through mining. As advancements in this field of research and development increase, more revolutionary trends are likely to emerge, and lab grown diamonds will become a dynamic and competitive player in the jewelry industry.

In India, the jewelry industry sees a promising future for lab-grown diamond-

The jewelry industry in India is noticing a promising future for lab grown diamonds due to various reasons. Lab grown diamonds are seen as more sustainable and environmentally friendly than traditional mined diamonds, which is appealing to consumers who prioritize environmental responsibility.

India is a prominent producer and supplier of lab grown diamonds:

India is exporting lab-grown diamonds to different countries for sale. The export rate of these diamonds has been continuously increasing. According to the report, exports extended notably by 103% from 2020 to 2021. India exports both HPHT and CVD diamonds along with diamond jewelry made from these stones to various regions across the globe.

India's export probable for lab grown diamonds is anticipated to be around INR 40,000 crore in the next five years as per recent surveys. Manufacturers of lab grown diamonds in India are requesting the authorities to include lab diamonds in the production-linked incentive (PLI) scheme.

Lab grown diamonds are being favored by the younger generations:

In India, the younger generations, mainly Generation Z and millennials, are leading the trend toward lab grown diamond jewelry. These individuals are more aware of their consumption

choices and are looking for sustainable options in diverse aspects of their lives, including diamonds. Lab grown diamond rings are becoming more famous for engagements and weddings because they are less expensive and eco-friendly.

As per a survey, 70% of millennials prefer lab grown diamonds, indicating the promising prospects of this growing industry. With the regular evolution of the diamond industry, a combination of sustainability, increased exports, and consumer choice has identified India as a widespread player in the blooming lab grown diamond industry.
