

Arete Partners with Dazz to Launch Managed Security Services Offering for Continuous Threat Exposure Management

Arete, a leading global cyber risk management company, announced that it is partnering with Dazz, the leader in security remediation.

BOCA RATON, FLORIDA, UNITED STATES, May 8, 2024 /EINPresswire.com/ -- Arete, a leading global cyber risk management company, announced that it is partnering with Dazz, the leader in security remediation, to deliver a new Continuous Threat Exposure Management (CTEM) offering that helps businesses prioritize and remediate critical issues using AI and automation. This offering aims at serving those who often have the greatest unaccounted-for risk — small and medium-sized businesses — that don't have the resources to respond to ever-growing threats to their applications and infrastructure. The newly-developed service will help them reduce the risk of exposure and business interruption.

“

This new proactive threat management offering will provide our customers with a centralized view of all vulnerabilities, automatically prioritize issues that present the most risk.”

*Joe Mann, Founder and CEO
of Arete*

“We're excited to partner with Dazz to launch our new managed security service for CTEM,” said Joe Mann, Arete's founder and CEO. “This new proactive threat management offering will provide our customers with a centralized view of all vulnerabilities, automatically prioritize issues that present the most risk, and enable them to fix critical issues in hours instead of weeks. Our vulnerability assessments for compliance validation will help them show their leadership the result of these improvements and their ability to more effectively achieve business goals.”

“Arete has a strong track record in helping customers prevent, detect, and respond to cyber threats,” said Dazz CRO Jared Phipps. “By adding the Dazz Unified Remediation Platform to its managed security services portfolio, Arete will be able to uniquely arm their clients with data to understand the priority vulnerabilities and fix them fast with AI and automation, which will reduce both business risk and work for security and engineering teams.”
