The association between calorie intake and social rank has largely been inverted in the other manner with regard to meal quantity. People in most industrialized nations have easy access to cheap, high-calorie fast food and ready-to-eat meals. The outcome has been a sharp increase in the average body mass index (BMI) throughout the industrialized world and beyond. Based on the latest recent data from EU countries, the World Health Organization estimates that 10–30% of adults in Europe are obese and that 30-70% of adults in Europe are overweight. Furthermore, the WHO reports that one in three 11-year-olds in the EU is overweight or obese. Thus to limit the food intake with proper nutritional support, the demand for specialty food ingredients is increasing worldwide. Therefore, the growing prevalence of obesity has enhanced the market CARG across the globe.
