

# Schools Hub Announces Release of AI-Powered Learning Solution

*AI-powered network of schools management on the go with the power of automation.*

WARREN, MICHIGAN, USA, May 13, 2024 /EINPresswire.com/ -- Schools Hub, the AI-powered, SaaS-based vocational learning management system (LMS), today announced the release of a new software platform that enables career coaches and others to amplify their online learning capabilities with individual schools and networks of schools. Schools Hub is an automated learning solution marketplace for vocational training. A single coach can run a course or unlimited courses with Schools Hub's out-of-the-box solution, potentially generating millions of dollars for a professional coach—using rich features that Udemy and other platforms do not offer.

“

Repetition equals stagnation. Embrace AI and Automation.”

*Shiblu Ahmad*

Schools Hub can run one school, a coaching service, or a network of schools under central management. The system offers optimum automation and less manual work. The platform will reduce administrative overhead that has previously taken time away from efficiency and progress.

Mr. Shiblu Ahmad, Founder and CEO of TS4U Inc., has the perfect mindset: “Repetitive tasks should be done through Automation, and contents must be updated to leverage humans and AI together.” That is precisely what Schools Hub is best for.

“The Schools Hub platform is a great alternative to the loopholes we have all dealt with in existing, old-fashioned learning management systems,” said Ashraful Alam (MD-Medical Doctor), the Co-Founder and Chief Technology Officer (CTO) of Schools Hub. “Legacy systems have many

manual processes, which makes them cumbersome to use and error-prone. These old-fashioned modes of learning leave students and providers bored and uninspired.”

Schools Hub addresses these deficiencies. It offers a much more engaging learning platform with agile proprietary software that solves issues endemic to legacy learning management systems. Schools Hub focuses more on the needs of schools, teachers, and students, with more relevant, automated interaction and, ultimately, student success.

Shiblu Ahmad explained, “We welcome AI adaptation to our education systems. The platform provides state-of-the-art student—and outcome-centric features that leverage AI in the educational experience.

Schools can manage various administrative tasks and student engagement from a single, centralized interface. This system streamlines school management and significantly improves the learning process, allowing schools and students to fully leverage the advancements in AI technology.

Schools Hub began as a unique “bootcamp” platform with extensive features and options specifically designed for learning excellence. The company is actively building its network of coaches, consultants, and implementation partners. It is also in talks with potential investors and strategic partners who can facilitate growth.
