

Rayotec Limited Releases New Article on the Differences Between Water and Electric Underfloor Heating

Surrey, England – Rayotec Limited, an award-winning UK-based company with over 30 years of experience in solar PV and hot water systems and underfloor heating, is pleased to announce the release of its new article on the differences between Water and Electric Underfloor Heating to help customers choose the right heating system for their home or business.

A “Which Trusted Traders” accredited company, Rayotec Limited is dedicated to providing exceptional customer service that guarantees families and business owners peace of mind across the company’s products and services. This customer-centric approach is emphasised with the release of the underfloor heating company’s new article, which offers individuals essential information, such as the different benefits between the two underfloor heating systems and the necessary energy source and floor type requirements. Rayotec Limited hopes the information will empower customers to select the best underfloor heating that caters to their unique needs. “Our expert team of advisers and installers offer advice on selecting the best underfloor heating system for your project and can also arrange a full installation service for Electric Underfloor Heating,” said a spokesperson for Rayotec Limited. “We have worked on a wide range of projects, from small domestic projects to large-scale developments such as hotels and apartment blocks. We are happy to help you find the best system that works for you at a great value.”

Chosen by companies and organisations, including the Ocado, Facebook (META), Cambridge University, Hilton & Netflix, Rayotec Limited has earned an impressive reputation as a reliable, professional, and high-quality underfloor heating supplier and solar PV repair and maintenance company.

Whether customers are undertaking a refurbishment, renovation, extension, or new build, the top UK underfloor heating company prioritises free technical advice, competitive prices, and the best quality underfloor heating systems that are compatible with a variety of floor types like tiles, vinyl, wooden, laminate floors, and carpet.

Electric and warm water underfloor heating delivers a range of advantages compared to traditional heating systems, including providing greater comfort due to the greater distribution of heat, a clutter-free heating experience, and increased heat efficiency. The two systems additionally offer unique individual benefits, such as:

Warm Water Underfloor Heating: From single-room extensions to large commercial buildings, warm water underfloor heating can be used with renewable energy sources, stay warmer for longer, and potentially cover a greater area in awkward-shaped rooms.

Electric Underfloor Heating: Perfect for retrofits or in buildings without a gas supply, electric underfloor heating has a fast warm-up time, is often cheaper and easier to install, and requires

minimal floor height build-up.

With a strong track record as an industry leader and over 3 decades of experience completing thousands of solar and underfloor heating installations and supplying thousands of electric underfloor heating kit systems to commercial, trade and domestic customers, Rayotec Limited guarantees access to only the highest quality electric and underfloor heating as well as complete support.

Rayotec Limited invites customers to explore its extensive Water and Electric Underfloor Heating range today to find the perfect inexpensive, efficient, and stable way to heat their home or business. Customers can contact the heating experts with questions by telephone or email, and for an underfloor heating quote, they can send a floor plan or dimensions via the contact form on the company's website.

About Rayotec Limited

Established in 1987, Rayotec Limited is an award-winning, UK-based family business that specialises in the supply and installation of electric and warm water underfloor heating, as well as the maintenance and repair of domestic and commercial PV and thermal solar systems.
