The air purification equipment refers to a device used for removing contaminants from the air in a room to improve indoor air quality.

The main product types of air purification are stand-alone air purification equipment and in-duct air purification equipment. An in-duct air purifier will be installed directly into the air duct path. It will be installed either before or after the air handler in homes with a central HVAC unit. The technologies involved are HEPA, electrostatic precipitators, activated carbon, ionic filters, and other technologies. The various end-users involved are residential, commercial, and industrial.
