Shipping container is a standardized reusable steel box used for the storage and movement of materials and products within a freight transport system. ISO or intermodal containers are used for the intermodal transport of freight. They are manufactured according to specifications from the International Organization for Standardization (ISO) and are suitable for multiple transportation methods such as truck, rail, or ship. These regulations define a shipping containers that meet size, strength, and durability requirements. The basis of these regulations is to guarantee that the container is expected to withstand extreme environments endured during transport as well as possess the structural integrity that needs to be lifted by cranes or other heavy equipment.

The image shows the cover of a report titled "Global Shipping Container Market". The cover features a photograph of a shipping yard with a forklift lifting a container. Text on the cover includes: "Global Shipping Container Market", "OPPORTUNITIES AND FORECAST, 2020-2027", "Global Shipping Container Market is expected to reach \$12.08 billion by 2027.", and "Growing at a CAGR of 4.3% (2020-2027)". Below the image, the text "shipping-container-market-2020-2027-1586265745 (1)" is visible.

The dry storage container segment in product type segmentation was the highest revenue contributor to the global shipping containers market in 2019. Also, small containers (20 feet) dominated the market in 2019 and is expected to maintain its position throughout the forecast period. Asia-Pacific is projected to remain the prime revenue contributor throughout the forecast period, and is expected to maintain the lead throughout the forecast period.

This was attributed to an increase in seaborne trade, and rise in trend of containerization of products worldwide. China accounted for a major share of the Asia-Pacific market. LAMEA is anticipated to experience a faster growth rate as compared to North America during the forecast period. This is due to the availability of larger coastal line and increase in dependency over seaborne trade by countries in this region.

Global Shipping Containers Market - <https://www.alliedmarketresearch.com/shipping-containers-market/purchase-options>

The size of containers segment is segmented into small containers (20 feet), large containers (40 feet), and high cube containers (40 feet). In 2015, the small containers segment occupied a majority of the market share and is expected to maintain its dominance throughout the forecast period (2017-2023). This is due to increase in manufacturing facilities, and growing import and export of commodities by countries worldwide. The high cube containers segment is anticipated to grow at the highest CAGR, owing to long life span, modest maintenance cost, and versatility of the container attached to it.

Factors such as increase in demand for cargo transportation through ships and rise in trade-related agreements supplement the growth of the shipping containers market. Moreover, factors such as fluctuations in transportation and inventory costs hamper the growth of the shipping containers market. However, factors such as anticipated trend of automation in marine transportation and increase in marine safety norms are the expected to provide opportunities for the growth of the shipping containers market during the forecast period.

Global Shipping Containers Market - <https://www.alliedmarketresearch.com/purchase-enquiry/2168>

By container size, the small containers (20 feet) generated the highest revenue in 2019.

By product type, the dry storage containers segment was the highest revenue contributor in 2019.

By region, Asia-Pacific contributed the highest market revenue in 2019, followed by Europe, North America, and LAMEA.

Asia-Pacific is anticipated to exhibit the highest CAGR during the forecast period.
