The main types of products in hydrofluoric acid are electronic hydrofluoric acid and industrial hydrofluoric acid. The electronic hydrofluoric acid readily reacts with acids, bases, and oxidants and is used for glass etching and ceramic etching in electronic devices. Silicon wafers are cleaned using electronic-grade hydrofluoric acid in semiconductors, microelectronics, and solar cells. It's the ideal buffer in wafer cleaning procedures when combined with ammonium fluoride. The different grades of anhydrous and diluted are used in fluorocarbons, fluorinated derivatives, metal picking, glass etching, oil refining, and other applications.
