### Allergic Rhinitis Overview

Allergic Rhinitis (AR), also known as hay fever, is a type of inflammation in the nose that occurs when the immune system overreacts to allergens in the air. It is usually a long-standing condition that often goes undetected in the primary-care setting. The classic symptoms of the disorder are nasal congestion, nasal itch, rhinorrhea and sneezing.

Some people only get Allergic Rhinitis for a few months at a time because they are sensitive to seasonal allergens, such as tree or grass pollen. Other people get Allergic Rhinitis all year round. Most people with Allergic Rhinitis have mild symptoms that can be easily and effectively treated. But for some people symptoms can be severe and persistent, causing sleep problems and interfering with everyday life.
