Understanding OCD:

Obsessive-Compulsive Disorder is a complex and nuanced mental disorder characterized by intrusive thoughts and repetitive behaviors aimed at reducing anxiety. There are several subtypes of OCD, including Contamination OCD, Checking OCD, Symmetry and Order OCD, Hoarding OCD, and more. Each subtype presents unique challenges, but all can severely impact daily life. Treatment can alleviate symptoms and significantly improve quality of life.

Treatment Options at Alpas Wellness:

At Alpas Wellness, we offer a range of evidence-based and holistic treatments to address OCD, including:

Cognitive-Behavioral Therapy (CBT): This psychotherapy focuses on changing negative thoughts and behaviors, helping patients manage OCD symptoms effectively.

Exposure and Response Prevention (ERP): ERP involves gradually exposing patients to their obsessions and teaching them to resist compulsive behaviors.

Medications: Our medical team prescribes medications such as SSRIs (e.g., Fluoxetine, Sertraline) and other approved drugs to help manage OCD symptoms.

Deep Brain Stimulation (DBS): For severe cases, DBS is a surgical option that involves implanting electrodes in the brain to alleviate symptoms.

Transcranial Magnetic Stimulation (TMS): TMS uses magnetic fields to stimulate nerve cells in the brain, offering a non-invasive treatment option for OCD.

A Holistic Approach: Alpas Wellness combines traditional treatments with alternative holistic methods to foster mind-body healing. Our residential treatment center features private nurse stations, a community kitchen, and inviting spaces to create a supportive and therapeutic environment for our patients.

About Alpas Wellness La Plata: Established as a pioneering residential treatment center, Alpas Wellness La Plata specializes in treating substance
