Allied Market Research

new report published by Allied Market Research, titled, “[Surgical Clamps Market](#) by Type, Application Type, and End Users: Global Opportunity Analysis and Industry Forecast, 2021–2030,” “The global [Surgical Clamps](#) market is valued at \$194.15 million in 2020, 260.85 million in 2030.” dollar is projected to appreciate at a CAGR of 2.9% from 2021 to 2030.

Surgical dressings are an important part of surgical medical devices. These are one of the most important tools in inpatient surgery. Surgeon clamps are used to capture, hold, attach, support or compress an organ,

muscle or nerve. Clamps are used in surgery primarily for ligation and blood clotting. Various types of clamps such as aortic vascular clamps, bulldog clamps, and Kelly clamps are available.

Factors Driving the Growth of Global Surgical Clamps Market Increasing number of cardiac surgeries is fueling the growth of the Surgical Clamps market. Furthermore, increasing number of thoracic surgeries is driving the market growth. According to World Health Organization Globocan statistics, there will be around 586,202 people diagnosed with thyroid cancer worldwide by 2020. Furthermore, according to iData Research, around 13 million surgeries would be performed worldwide each year. Additionally, FDA aims to increase access to quality, reliable, and accurate surgical dressings to meet public health needs and improve consumer treatment to the sky.

Surgery is known as the best cure for various serious types of diseases. The prevalence of cardiovascular diseases in China has been increasing continuously. As per the report published in the Journal of Geriatric Cardiology by Li-Yuan Ma, approximately 290 million patients of

cardiovascular disorders in China and approximately 2 in 5 deaths happened in China due to CVD. Therefore, the rising number of cardiovascular diseases results in increasing number of surgeries. This has led to increase in usage of surgical clamps that boost the growth of the market. Ageing population is at high risk of having cardiovascular diseases, which leads to increasing demand for surgical interventions. Thus, increasing geriatric population is also expected to drive the substantial growth of the market during forecast period.

The global surgical clamps market is segmented on the basis of type, usage, material, end user, and region. On the basis of type, the market is divided into hemostat clamps, aortic vascular clamps, bulldog forceps, needle holder, and others. The hemostat clamps segment dominated the market in 2020, and this trend is expected to continue during the forecast period, owing to increase in number of cardiac surgeries, advancements in R&D activities in pharmaceutical & medical device industries, and surge in adoption of surgical clamps instruments.

By usage, the market is classified into disposable and reusable. The disposable segment acquired top position in the market in 2020, and this trend is expected to continue during the forecast period, owing to large number of surgical forceps offered by key players and increase in use during surgical procedure. By material, the market is fragmented into stainless steel, titanium, and others. As per end user, the market is clas

Surgery is known to be the best treatment for a variety of serious diseases. The prevalence of cardiovascular diseases continues to rise in China. According to a report published in the Journal of Geriatric Cardiology by Li-Yuan Ma, there are about 290 million patients with heart disease in China and about 2 out of 5 deaths due to CVD in China. This has led to an increase in surgical wrapping that drives the growth of the market. Older people are at increased risk for cardiovascular disease, increasing the demand for surgery. Thus, the market is also expected to grow significantly during the forecast period owing to the increasing aging population.
