Europe is estimated to be the largest in the automated parking system market

The adoption of an automated parking system is high in the UK, Germany, Denmark, Norway, Switzerland, Spain, and the Netherlands. Rising adoption of automated parking systems is expected to enhance parking solutions, save space, and reduce vehicle emissions while parking the car. Europe has a state of art technology background and has a presence of leading players in automated parking solutions. This has further encouraged private and public sectors to adopt automated parking solutions for managing parking problems effectively.

A key factor restraining the growth of the automated parking system are high complexity of the system, issues with quality control, and high capital requirement. The construction of an automated parking system is complex and requires deliberation of many factors. In the absence of regulations to monitor the working of an automated parking system, the issue of quality control also poses a challenge for manufacturers.
