

B'M Economic Analysis: US futures slide as doubts about the economy grow

USA, June 4, 2024 /EINPresswire.com/ -- US stocks sank into the red early Tuesday as investors weighed signs the surprising resilience in the US economy might be starting to show cracks.

Futures on the S&P 500 (ES=F) and the tech-heavy Nasdaq 100 (NQ=F) both fell roughly 0.5%, having closed higher after a bumpy day for the three major gauges. Dow Jones Industrial Average futures (YM=F) also dropped 0.5%.

Stocks have struggled to find a footing as investors face a dilemma over the path of interest rates. Recent weak data has prompted Wall Street strategists to scale back their optimism for economic growth, which supports a case for rate cuts. But Federal Reserve officials have warned against hoping for a pivot anytime soon as they wait for inflation to cool sufficiently — and when that time comes isn't clear.

Eyes will be on April job openings figures due later Tuesday for more clues to how the economy is holding up, with factory and durable goods orders also on the docket. The labor market update, which is expected to show a drop, serves as a precursor to the crucial May jobs report on Friday — the data highlight of the week.
