

Coagulation Testing Market Projected to Reach \$8.8 Billion by 2031, Growing at an 11.5% CAGR

WILMINGTON, DELAWARE, UNITED STATES, June 6, 2024

/EINPresswire.com/ -- Coagulation testing is a type of blood test that evaluates a patient's blood's clotting capacity and clotting time. Clotting problems can result in excessive bleeding or clotting, both of which can be fatal. If the doctor thinks the patient has clotting issues, coagulation testing is prescribed. There are several inherited and acquired bleeding disorders, the most prevalent of which include haemophilia, blood factor

deficiencies, and others. It is crucial to recognize bleeding disorders and keep a watch on the coagulation status since they can lead to abnormal bleeding. The global market for coagulation testing is growing significantly as a result of surge in prevalence of blood clotting issues in many regions and the rise in cardiovascular illnesses, which can also call for routine coagulation testing. These two factors are driving up the demand for [coagulation testing market](https://www.alliedmarketresearch.com/coagulation-testing-market) growth.
